# Anaconda Installation

Step 1 : Google

**Step 2: Click on the first link. Go to the Downloads page**

3. Step 3

Download the version your operating system

If on windows just run the installer to install.

If on Linux.

Open a terminal in the folder where Anaconda was download usually the downloads folder. Simply right-click while in the downloads folder and press on **Open in Terminal**

Run this command on the Terminal. Notice the dot before the slash, and no space in between

./Anaconda3-2020.02-linux-x86_64.sh

Should you get a permission error start by changing the permission in order to make the file executable

chmod 777 Anaconda3-2020.02-linux-x86_64.sh

Then run the installer again
 ./Anaconda3-2020.02-linux-x86_64.sh

Replace Anaconda3-2020.02-linux-x86_64.sh with the name of the file you downloaded. The assumption is that you are working on a local machine and not a server.
